Self Coloured Plastic Ductwork

Description: Plastica Technologies have a range of self coloured uPVC plastic ductwork which is ideally suited to the corrosive atmosphere encountered within swimming pools which is aesthetically pleasing and is available in large diameters, rectangular and square cross sections.

The ductwork is available in any BS or RAL colour making it ideal where the ductwork is exposed on either supply or extract air systems. We also have our unique discreet bracketing system incorporating a reinforced stiffener along the top of the duct from which the brackets are fixed eliminating the need for untidy clip bands around the duct.

Spigots can also be fitted to the ductwork prior to delivery to suit any grille configuration.

**DUCTWORK**

Circular section supply ductwork to the pool area, utilising the unique discrete bracketing system.

The whole system was colour coordinated, resulting in a pleasing finish, trouble and maintenance free installation.

UNDERGROUND DUCTWORK

Underground ductwork being used within the leisure sector.

This design of ductwork has excellent tensile modulus of elasticity and thermal insulation characteristics, as well as being corrosion resistant.

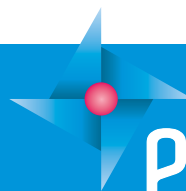

The material absorbs negligible amounts of water, therefore does not swell when immersed.

Constructed to an enhanced DW154 specification and with flexibility on size, it makes an ideal choice for below ground applications.
